How to identify genuine Axis Bank communication

How to identify genuine Axis Bank communication

Fraudsters frequently attempt to impersonate your bank. They may send fraudulent SMS messages, emails, or call you claiming to be Axis Bank. Understanding how to confirm official communications can help protect you from fraudsters.

If you respond to calls from unknown numbers and share your OTPs, PINs, or card information, fraudsters can gain access to your accounts and commit unauthorized transactions, resulting in financial hardship.

Follow these basic checks to ensure your bank account is always safe.

Check the sender before you trust the message.

Axis Bank sends messages only through **verified sender IDs and email domains** , making it easier for customers to distinguish real communication from fraud.

- **Check the sender's SMS header**
  Axis Bank sends SMS only from the following registered headers:
- AXSBKS – Service messages
- AXSBKT – Transaction alerts
- AXISMRP – Promotional messages

If an SMS comes from a random mobile number or a suspicious header, do not tap on any links.

- **Check the sender's email address**
  Official Axis Bank emails are sent only from:
- alerts@axis.bank.in– Transaction updates
- cc.statements@axis.bank.in– Credit card communication

- info@digital.axisbankmail.bank.in – Promotional updates

Be cautious of emails with spelling errors or lookalike domains.

- Check the phone number
  As per RBI guidelines, your Axis Bank Relationship Manager will contact you only through phone numbers starting with 1600 and all promotion calls will start with 140. This measure is designed to ensure your safety and prevent fraudulent activities.

  Please do not respond to calls from any other numbers claiming to be from Axis Bank. Always verify the caller's number before sharing any personal or financial information. The bank never asks for OTP, PIN, CVV, or passwords on calls.

- Verify the Website Link before logging in
  Axis Bank's official domain is **axis.bank.in**. Always ensure the website ends with **bank.in** before entering credentials. Fake websites may look identical, this is known as **pharming fraud.**

  What happens in fake website frauds?

  Fraudsters create websites that look exactly like bank login pages. If you enter your user ID, password or OTP there, they can misuse your account.

  How to stay safe while logging in?

- Always type the website address yourself
- Ensure the URL ends with.bank.in
- Look for the secure padlock (https://) in the browser
- Avoid logging in using public WiFi
- Never click links received via SMS, WhatsApp or email claiming urgency

  What if something looks suspicious?

- Stop immediately
- Do not enter any details
- Close the browser
- Visit the official Axis Bank website manually
